

*"Responder® NET takes advantage of our existing network with a single point of connection. Its bandwidth requirements are low and it's easy to maintain."*

*The NET Effect*

## PC Convenience, Responder Reliability

<< Responder NET is engineered for data integrity, reliability and speed, using TCP/IP and Microsoft® Client/Server platforms. >>

Responder® NET takes advantage of Responder IV nurse call communications architecture while powering its performance with personal computers and LAN/WAN systems.

### Maintains Integrity of your LAN

Responder NET is engineered for use with any Microsoft network platform which makes it completely compatible with existing user preferences and systems. Bandwidth requirements are low and there's no need to install or maintain client software - it's a simple shortcut on any networked desktop PC.

### Maintains Reliability of Nurse Call System

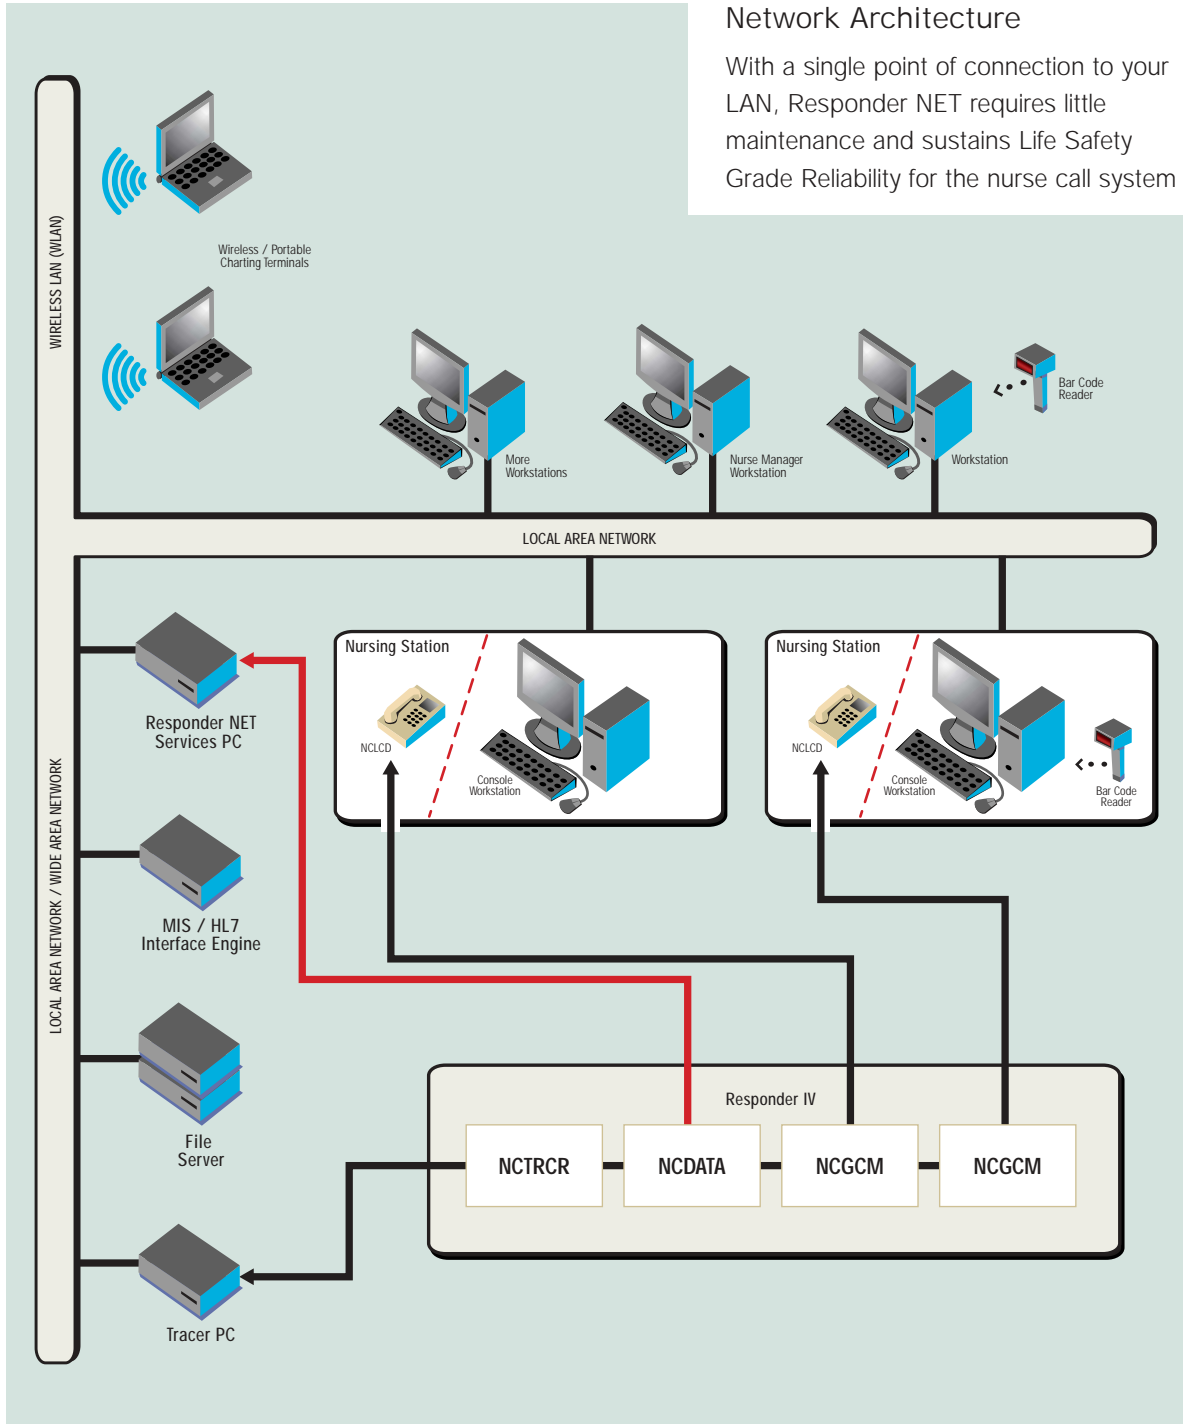

Here's another important benefit - Responder NET provides automatic back-up to your nurse call system. A nurse call failure cannot harm your network; network failure cannot disable the nurse call system. Life Safety Grade Reliability is maintained. Keep in mind, too, that any Responder IV system can be upgraded to Responder NET functionality - expanding its useful life and protecting your technology investment.

<< Responder® NET is versatile enough for a single facility,  
a campus or an entire hospital network. >>

### Network Architecture

With a single point of connection to your LAN, Responder NET requires little maintenance and sustains Life Safety Grade Reliability for the nurse call system
